

About the One Health Concept

The One Health concept promotes an integrative approach to public health, reflecting the interconnectedness of a larger ecological system. It is a worldwide strategy for expanding interdisciplinary collaborations and communications in all aspects of healthcare for humans, animals and the environment. The synergy achieved will advance health care for the 21st century and beyond by accelerating biomedical research discoveries, enhancing public health efficacy, improving medical education and clinical care, and ensuring water and food safety and security with innovative and sustainable agriculture. Thus, following the One Health concept results in a more resilient, safer world for all.

Scope of the Conference

The 3rd GRF One Health Summit 2015 will further explore, advance and agree on the need for a global integrative risk management approach for One Health. Focussing on research, education, training and implementation, the conference will identify ways to achieve added value by multi discipline, multi-sectoral and multi-stakeholder cooperation and promote enhanced public-private partnership models. The findings of the conference will be used for advocacy, recommendations on organisational changes and stimulate a more efficient collaboration between stakeholders.

The short abstracts, comprising a maximum of 300 words, should include the goals, the methods and the findings of the paper to be presented or the session you want to organise. Abstracts can be submitted for the following contribution formats:

- Oral presentation
- Poster presentation
- Session

Submission

Submit your abstract online at <http://onehealth.grforum.org>

Review Process

The submitted abstracts will undergo a review process led by the One Health Scientific Advisory Committee. The review will be based on the following criteria:

- Quality of content
- Significance for practice
- Originality & innovation
- Relevance for the One Health approach
- Presentation and formal appearance

Topics

Public/Global Health

- Communicable diseases
- Non-communicable diseases
- Emerging diseases
- Allergies
- Mental illnesses
- Pandemics
- Water, sanitation & hygiene (WASH)
- Pharmaceuticals, Vaccination & Resistances
- Socio-economic determinants
- Healthcare financing and insurance
- Intervention strategies and modelling
- Surveillance and Early response
- Added value of One Health

Animal Health

- Vector-borne pathogens
- Zoonosis
- Wildlife, pets and livestock diseases
- Antibiotic, antiviral and antiparasitic resistance
- Intervention strategies
- Surveillance and Early response

Environment and health impact

- Terrestrial, aquatic and aerial pathogens
- Immuno-toxicology and infectious diseases
- Climate change, environment and emerging pathogens
- Ecosystems and wildlife in pathogen emergence
- Comparing pathogenesis in natural and spill-over hosts
- Ecosystem goods & services
- Resource Management (Water, Soil, Energy)
- Desertification and land degradation

Food Security, Nutrition & Agriculture

- Food borne diseases / allergies
- Food security and food safety
- Animal production
- Agricultural production (organic agriculture, Agro chemistry & biotechnology)
- Food-Feed-Biofuels Competition
- Nutrition in Cancer, Diabetes and Other Diseases
- Micronutrition, Nutraceuticals and Functional Foods
- Food Technologies and Innovations in Food Processing

One Health & Sustainable Development

- One Health in Action (implementation, on-going projects, added values)
- Demographics and behaviour in humans and animals
- Drivers :Globalisation, Poverty, Migration and displacement, Urbanization
- Equity
